Abstract

The tourism sector is an important driver of India's growth and development. In India, the Tourism industry is an instrument of generating employment, poverty alleviation and sustainable human development. The hospitality industry is a part of the travel and tourism industry. The hospitality and Tourism Industry is a source of revenue in India. In 1986, tourism was given the status of an Industry. After conducting a critical assessment in 1987, the government of India allowed the franchising of 3 and 4-star hotels by firms in India. Tourism was made a priority sector in 1991, which made the hospitality industry eligible for regular approvals and 51% was made available by an overseas partner. In 1898 major international hotel chains entered our nation, after tourism got the export house status. Tourism is also a key driver of foreign exchange. FDI inflows in tourism touched US\$ 16.38 billion from April 2000 to March 2022. Globally India is the third leading concerning investment in tourism having an inflow of US\$ 45.7 billion in 2018, which account for 5.9% of the overall investment. It is expected that the tourism and travel industry will create nearly 46 million jobs in the coming year. The country's tourism industry contributes more than 7% to India's GDP. Our country has also witnessed a tremendous increase in foreign tourists since the 2000s. All these elements have combined to make India's tourist industry the seventh-largest in the world. This paper mainly aims and seeks to assess and

ABSTRACT

The lifestyle of people across the globe has become fast and faulty, which has resulted in a highly stressful life full of anxiety and depression. People's habits have become very unhealthy, which has led to huge rise in several Non-Communicable diseases (NCDs) or lifestyle disorders like diabetes, hypertension, cardio vascular diseases, mental health issues, etc. The heart disease is still the biggest cause of mortality in the world. It is spreading at an alarming rate due to bad lifestyles, consumption of junk food, smoking, drinking, and lack of awareness and alertness. These lifestyle disorders are spreading at an alarming rate and are spreading from epidemic to a pandemic. These, besides other health consequences, have serious social and economic implications for the individual and for the country. These conditions have multiple dimensions and can be controlled and prevented if diagnosed and treated in time by improving the overall personality of an individual with the help of technology and self-management.

INTRODUCTION

The life style of people has changed drastically across the world and the people have adopted a very fast
