

**SHAHEED HIMAYUN MUZAMIL MEMORIAL
GOVT. DEGREE COLLEGE (BOYS) ANANTNAG**

Report on "Block Chain Technology Career Counselling" organised by department of computer applications.

A career counselling session was held on **30th May 2025** in the college conference hall, organized by the **Department of Computer Applications** in collaboration with the **National Institute of Electronics and Information Technology (NIELIT)**. The event saw active participation from enthusiastic students across the college.

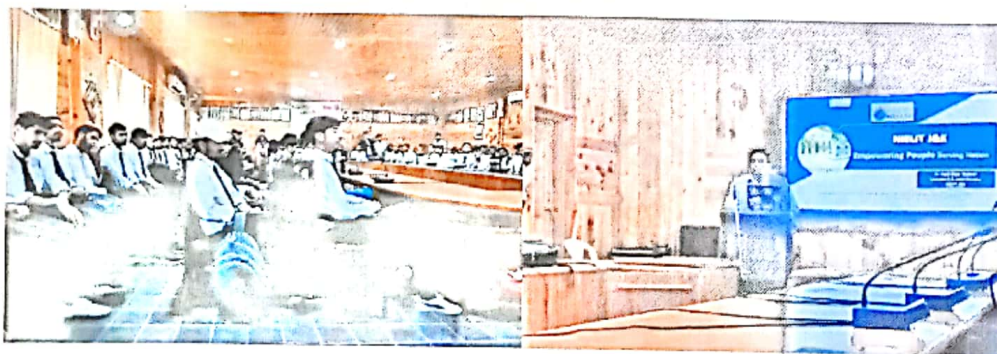

The session began with a warm welcome address by **Prof. Ab. Qayoom Sofi**, Head Department of Computer Applications. He extended his heartfelt thanks to the **Dr. Mushtaq Ahmad Malik**, Principal of the college, for his continuous support and encouragement.

The main aim of the session was to make students aware of the **emerging career opportunities** in the field of **Computer Applications**, especially in cutting-edge areas such as **Blockchain Technology, Artificial Intelligence (AI), and Data Science**. The session focused on the importance of **upskilling and reskilling** to keep up with the rapid changes in the IT industry.

The session was led by Chief Guest **Dr. Syed Nisar Hussain Bukhari**, Joint Director NIELIT. He shared valuable insights into the current trends and demands of the global job market. Dr. Syed Nisar Hussain Bukhari highlighted a significant point: while the demand for experts in fields like AI and blockchain is growing rapidly, only about **20% of the workforce** currently has the required skills. This creates a **huge opportunity for students** who are willing to learn and adapt.

He encouraged students to focus not only on theoretical knowledge but also on developing practical skills through certifications, internships, and project work. The session concluded with an interactive Q&A round, where students got their doubts clarified and received guidance on how to plan their academic and career paths.

Overall, the session was highly informative and motivating. It provided a clear direction to students on how to align their learning with industry demands and stay competitive in a technology-driven world.
